

Allweiler exhibits its pump competency at SMM

(Radolfzell/Germany) Allweiler AG, Europe's leading pump manufacturer for Marine and Offshore applications, will be exhibiting its extensive selection of pumps and complete systems at SMM in Hamburg from September 23 to 26. Allweiler is located at booth 143 in hall A2. Its product line includes pumps for the engine room and in addition all types of pumping units for a ship's infrastructure. These include everything from lube-oil pumps to process pumps.

Allweiler AG provides commercial fleets, navies, cruise liners, and specialized ships with all the pumps they need from a single source. Traditionally, this German company has focused on pumps in the engine room. But now it is extending its extensive know-how to all areas of the ship. According to Dr. Michael Matros, Chairman of Allweiler AG: "We are observing a trend towards ships having a high degree of technical specialization. We know that we have the engineering competence to meet these requirements." Allweiler's product line includes centrifugal and screw pumps, progressing cavity pumps and peristaltic pumps, as well as entire pump packages delivered complete with control and monitoring systems.

As Germany's oldest and one of the world's largest pump manufacturers, Allweiler relies on its decades of experience in the design, production, and materials of its Marine pumps. The company operates its own foundry where it casts extraordinarily durable and corrosion-resistant bronze alloys. Many of the pumps originating from Allweiler's foundry meet the stringent requirements of the world's navies. For commercial shipping, this translates into extraordinarily high reliability, long maintenance cycles, and consequently the lowest possible costs (Total Cost of Ownership, TCO) throughout the lifecycle of every pump.

Visitors at SMM can view the special characteristics of the materials in a 10-cubic-meter water basin. An interactive map of the world will also show that an Allweiler service branch is never far away.

Service partners ensure that maintenance tasks are completed quickly throughout the world and that spare parts are easy to obtain anywhere. Allweiler guarantees global reply times of no longer than 48 hours - by land and by water.

Allweiler AG is a leading supplier for Marine and Offshore users

Allweiler AG is the European leader in the Marine and Offshore market, particularly for cargo and naval applications. Internationally, the company is one of the three largest pump manufacturers, including leading positions in the market for cargo ships in China. A significant portion of Allweiler's total sales comes from the "Marine and Offshore" area. Major reasons for this are: Allweiler's decades of experience, its ability to continuously improve its pump units, and its use of the most advanced tools for designing and developing innovative new products. In addition to the traditional market for new ship construction and renovations, new ship designs with specialized requirements are beginning to play an increasingly important role.

The company produces and sells pump for virtually every field of application, including such diverse areas as two-ton fishing trawlers, supply ships, and 380-ton tankers. Global service and support centers ensure that customers have access to qualified maintenance for any pump unit whenever necessary.

Allweiler's line of specialty shipbuilding products includes: ALLMARINE volute centrifugal pumps (series MA, MI, NISM) in block and inline versions, centrifugal pumps for high-temperature applications (ALLHEAT series) and as lube-oil circulation pumps (MELO series), two-screw pumps (211 series), triple-screw pumps (SNH, TRILUB, ZASV series), progressing cavity pumps (TECFLOW series), anti-heeling propeller pumps (ALLTRIMM series) and fire-extinguishing pumps (NAM-F series). Areas of application range from wastewater pumping to boiler feeding and sludge pumping to delivery pumping and pumping for auxiliary units.

Founded in 1860, Allweiler AG is the oldest German pump manufacturer and the European market and technology leader for centrifugal, propeller, screw, progressing-cavity, cogwheel, rotary lobe, macerators, and peristaltic pumps. Allweiler AG owns a foundry and produces ready-to-use fuel and lube-oil skids and rinsing-water facilities. Allweiler AG has its main German headquarters in Radolfzell on Lake Constance as well as a major production site in Bottrop, Germany. Since 1998, Allweiler AG has been part of Colfax Corporation, a global leader in pump development, design, manufacturing, and maintenance. Colfax Corp. is the parent company for eight leading pump manufacturers that provide solutions for demanding pumping tasks around the world.
