Colfax Offers New Allheat™ Pump Series for High Temperature, High Pressure Needs With Uncooled Mechanical Seal

Unique design lowers initial cost and reduces maintenance expenses

MONROE, NC – Colfax Corporation (NYSE: CFX), a global leader in fluid-handling solutions for critical applications, announces through its business platform Colfax Fluid Handling the introduction of its new Allweiler Allheat™ series of heat transfer pumps. Allheat pumps are capable of pumping synthetic oils at temperatures up to 400°C and design pressures up to 40 bar (PN 40), yet the design requires no mechanical seal cooling. They offer an economic alternative to conventional heat-transfer pumps that rely on costly, special seals.

The Allheat series' uncooled mechanical seal feature offers users a pump that is capable of performing under high temperatures with an extremely low initial investment and low maintenance costs.

New Allheat centrifugal pumps are ideal for high-temperature heat transfer applications such as those encountered in solar installations and during ground decontamination. Available as base-plate, block, and inline versions, Allheat pumps include a wide range of standardized parts that makes them economical to produce and simple to maintain. Finally, a uniform combination of materials covers all pumped liquids.

Allheat pumps are extremely versatile, another economic benefit. For example, if an operator decides to convert to modern synthetic oils, he can easily adapt existing pumps to the elevated requirements simply by replacing the insert units. The flexibility of using a single pump type with a variety of heat-transfer liquids should greatly simplify processes for operators and plant designers. "The Allheat series offers a unique, dependable design that results in lower total costs (TCO) than comparable systems," said Stefan Kleinmann, Vice-President of the Industry Business Segment, Colfax Fluid Handling.

Colfax Fluid Handling's Allweiler brand has provided heat transfer pumps to global customers for more than 40 years. High-temperature pumps, designed specifically for synthetic heat-transfer oils, have been available for approximately 10 years.

Caption:

With a maximum capacity of 1450 m^3/h, the "Allheat 1000" is the flagship of Colfax Fluid Handling's new 400 °C heat-transfer pumps. The bearings in the pump are specifically designed to handle the low lubricity and low viscosity often encountered with synthetic heat-transfer oils.

ABOUT COLFAX CORPORATION – Colfax Corporation is a global leader in critical fluid-handling products and technologies. Through its business platform, Colfax Fluid Handling and reporting global operating subsidiaries, Colfax manufactures positive displacement industrial pumps and valves used in oil & gas, power generation, commercial marine, defense and general industrial markets. Colfax's operating subsidiaries supply products under the well-known brands Allweiler, Baric, Fairmount Automation, Houttuin, Imo, LSC, Portland Valve, Rosscor,Tushaco, Warren and Zenith. Colfax is traded on the NYSE under the ticker "CFX." Additional information about Colfax is available at www.colfaxcorp.com.
