

Allweiler to exhibit All-Optiflow and Alldur at IFAT

(Bottrop) Allweiler GmbH will exhibit its new All-Optiflow pump series at the IFAT 2012 trade fair in Munich, Germany. These new progressing cavity pumps are designed for use in waste handling, wastewater treatment, and paper manufacturing, among other applications. All-Optiflow progressing cavity pumps generate pressure of up to 6 bar (87 psi) to move virtually any type of liquid (even with fibrous and solid materials) efficiently and reliably. Their capacity can be up to twice as high as conventional pumps. In addition to the All-Optiflow pumps, Allweiler will also focus on Alldur stators at the trade fair. Alldur is a new, highly wear resistant stator material that is ideal for use in sewage treatment plants.

With their high power density, All-Optiflow pumps reduce energy consumption by up to 15% compared to conventional progressing cavity pumps. Stub shaft diameter is approximately 30% smaller than conventional pumps, reducing friction by nearly 50%. In conjunction with special wear-resistant materials, these characteristics significantly reduce maintenance costs. The All-Optiflow series employs a variety of innovative design details that reduce energy consumption as well as costs for maintenance and spare parts. Examples include redesigned pumping elements with higher power density, low-friction rotors and shaft seals, and stators with a special surface.

Allweiler has also spent decades optimizing the standardization of structural components, such as a patented stub shaft connection and a lifetime-lubricated joint. As a result, pump operators can move virtually any liquid with very economical investment costs and operating expenses. The stator surface exhibits a honeycomb structure. Combined with the patented "shark-skin" rotors, the results are low starting and operating forces for greater efficiency and constant performance curves during operation.

Visitors to IFAT 2012 will also have a chance to see related Alldur stators. Alldur was specially developed for use in sewage treatment plants and for pumping abrasive wastewater. The elastomer's new chemical composition and Allweiler's processing methods increase service life by up to three times.

Image caption:

With a maximum capacity of 3800 l/min, "All-Optiflow" can handle all types of industrial processes. It pumps liquids with viscosity up to 300,000 mm²/sec with a maximum pressure of 6 bar. The pumps' advanced design, materials, and special surfaces significantly reduce expenses for energy and maintenance compared to conventional progressing cavity pumps. The optional Alldur stators can stay in service for up to three times longer.

ABOUT COLFAX CORPORATION – Colfax Corporation is a globally diversified corporation that delivers products and services related to gas and fluid handling as well as production processes and technologies for industrial customers and state-run organizations around the world. Colfax brands include Howden, Colfax Fluid Handling, and ESAB. Colfax brands are among the most respected in each of its target markets around the world. Colfax is a public corporation listed on the New York Stock Exchange (ticker symbol CFX). Additional information about Colfax and its products is available at www.colfaxcorp.com.

NOTICE REGARDING FORWARD-LOOKING STATEMENTS:

This text may include forward-looking statements, including those covered under the American Private Securities Litigation Reform Act of 1995. These include but are not limited to statements about plans, targets, expectations, and intentions of Colfax in addition to other statements that are neither historical nor current facts. Forward-looking statements are based on current expectations of Colfax. They involve risks and uncertainties, as a result of which actual results may deviate significantly from expected results described explicitly or implicitly in such forward-looking statements. Factors that may cause results to deviate significantly from current expectations include but are not limited to events mentioned in the Colfax Registration Statement in form 10-K and in quarterly report 10-Q under the section "Risk factors" and in other reports submitted to the US Securities and Exchange Commission. In addition, these statements are based on a series of assumptions that may change. The statements in this press text are valid only at the present time. Colfax accepts no obligation to update the information contained here. When used in reference to activities described in this press release, the term "Colfax" may refer to one or several of the global subsidiaries of Colfax and/or their internal business segments and not necessarily to activities within Colfax Corporation itself.
